EDI Trading partner kit

3. Messages

3.1 Supplier EDI

Bunzl has created a special Edifact message set that is based on and compliant with the EANCOM D01B standards. These messages include all elements and segments that are needed in the P2P processes.

Message name	Version	In/Out	Description	Operational/Development
ORDERS	D01B	Out	Purchase order	Operational
ORDRSP	D01B	In	Order response	Operational
INVOIC	D01B	In	Invoice	Operational
DESADV	D01B	In	ASN	Operational

The use of other messages and versions is possible on a project basis. All development cost on the Bunzl side will be charged to the supplier.

3.2 EDI with clients

Bunzl supports several different EDI messages for communication with clients. Most of them are specially defined for a customer or a group of customers. We can develop new message versions for the customer if needed and if the message volume allows the investment.

Bunzl uses and prefers 2 standard formats for data communication as they are already present on the TIE platform and little effort is needed to make changes.

3.2.1 Edifact

Message name	Version	In/Out	Description	Operational/Development
ORDERS	D96A	In	Purchase order	Operational
INVOIC	D96A	Out	Invoice	Operational
DESADV	D96A	Out	ASN	Operational
DESADV	D93A	Out	ASN	Operational
DESADV	D01B	Out	ASN	Operational
APERAK	D96A	Out	Aperak message	Operational
ORDRSP	D96A	OUT	Orderresponse	Operational (Allshoes only)

3.2.2 XML

Message name	Version	In/Out	Description	Operational/Development
ORDERS	cXML/UBL	In	Purchase order	Operational
INVOIC	cXML/UBL	Out	Invoice	Operational

EDI Trading partner kit

4. Communication methods

Bunzl uses the TIE EDI platform. This platform supports a number of communication methods.

We prefer communication via IP based protocols like AS2 and (s)FTP. Communication details are exchanged between the TIE technical team and the technical team of our suppliers and clients.

4.1 AS2

Bunzl has a fully operational and Drummond certified AS2 connection. AS2 guarantees a secure and fast connection. Security level is met by using digital signatures and encryption. Can be used for business critical information

4.2 FTP

As from 18 November 2020 no FTP connection will be allowed to set up or change. When a current FTP connection must be changed, we need to change it into a sFTP connection.

4.3 sFTP

A more secure version of the FTP Protocol. Can be used for business critical information. sFTP details will be sent to our communication partners on request. Bunzl does not have sFTP server and will always be the client.

4.4 Email

Standard mail is used without encrypting and signing the messages. Messages can be sent to orders@bunzl.nl.

4.4.1 NemHandel (Danish Government)

There is a standard NemHandel (OIORASP) connector available

4.4.2 Peppol (European Government purchasing platform)

Bunzl has a full certified and operational Peppol connector that can be used in our configuration.

4.4.3 Digipoort (Dutch Government)

Bunzl has a fully certified and operational Digipoort connection that is integrated in the Bunzl EDI environment.

EDI Trading partner kit

4.5 Platforms

Bunzl has a connection with the following procurement platforms.

- OB10
- Basware
- ProActive
- E-Size
- GHX
- Leonardo
- T-Blox
- ProCare
- Axxerion
- ProQuro
- Inconto
- HubWoo
- AXI

5. Catalogues

Bunzl provides a number of catalogue messages. Most of those are specially created for customers, but there are types that can be used in other situations as well.

We support amongst others:

- BMECAT
- EANCOM PRICAT (Allshoes only)
- OCI catalogue
